SIBUGLAS

Scratch-resistant high-gloss surfaces combined with extraordinary designs create the basis for long-lasting design objects. The real glass effect creates a revolutionary depth effect and thanks to its material properties, SIBUGLAS scores with low weight and a highly reduced risk of breakage.

EXTRA EQUIPMENT & ACCESSORIES

PRODUCT CHARACTERISTICS

To answer your questions as quickly as possible, our team has worked out a technical table with product characteristics, extra equipment and much more for each of our products:

NA NON-ADHESIVE

Non-adhesive design panels can be bonded to absorbent substrates in two different ways, depending on the area of application. Bonding with white glue (PVA) and bonding with Cartridge adhesive and putty adhesive.

SA SELF-ADHESIVE

SA - the back of the design sheet is equipped with an adhesive layer. For this we use high-quality acrylic adhesive substance.

Self-adhesive (SA) sheets are ideally suited to non-absorbent surfaces such as coated MDF/chipboard, glass, metal, plastic, etc.

Exception: NATURE-LINE see page 122

Whenever possible, self adhesive SIBU DESIGN products should be processed within 12 months.

Self-adhesive (SA) sheets are unsuitable for use on ceilings. Alternative processing options are available on request.

SURFACE MATERIAL

In a changeable world we focus on lastingness and high standards by using 100% PVC-free surfaces. We make a distinction between:

- **ABS = Acrylonitrile butadiene styrene**
- **Print**
- **Impregnated paper = paper with protective varnish**
- **PET = Polyethylene terephthalate (UV lacquer for the AR version)**
- **PET/fibre = Polyethylene terephthalate (synthetic fibre)**
- **PMMA = Polymethyl methacrylate**
- **PMMA AR+ = Polymethyl methacrylate with AR+ scratch resistant coating**
- **PP = polypropylene**
- **PU-leather = Polyurethane/synthetic leather surface**

All variations are optically outstanding and also fascinate by their unique haptics. They correspond to the highest demands and they are suited especially for the interior area.

BASE MATERIAL

For most of our products we use as base material a specially developed, highly impact resistant polystyrene type (HIPS). HIPS distinguish particularly by robustness, high impact and a very low weight.

Scratch-resistant PMMA is employed for the SIBUGLAS product group.

A backing made of natural fibres is used in the sustainable product line NATURE-LINE.

- **ABS = Acrylonitrile butadiene styrene**
- **HIPS = high impact polystyrene**
- **HIPS, PE foam = high impact polystyrene and Polyethylene foam**
- **HPVC = Hard polyvinylchlorid**
- **Natural fibre**
- **PMMA = Polymethylmethacrylate**
- **PP-glass fibre = Polypropylene with fibreglass**
- **PS = Polystyrene**

Reverse side of SIBUGLAS panels:

- **PU-leather = Polyurethane synthetic leather surface**
- **Paper = printed paper**

MATERIAL THICKNESS

The given material thicknesses refer to the stock program in non adhesive (NA) and self adhesive (SA) version.

MAXIMUM RELIEF HEIGHT

With the given data we define the highest position of the respective design in non-adhesive (NA) and adhesive (SA) version.

TEMPERATURE STABILITY

Already during development stage our SIBU DESIGN sheets are tested in special thermo-containers stuck on ground as well as unstuck with high temperatures and high air humidity.

Only the very best qualities correspond to our strict directives. The given data of the temperature stability refer to the lasting application of the product stuck on different grounds and to the long-term using temperature also without adhesion.

WET ROOM SUITABILITY

An exposure of SIBU DESIGN sheets to humid areas is given when a design sheet is subjected to short term humidity condition. This humidity condition can occur by reason of high air humidity or by direct sprinkling water.

- Wet room suitability
- Good wet room suitability
- Limited suitability (remove splash water)
- Low wet room suitability
- Unsuitable for wet rooms

ABRASION RESISTANCE

Our technology team already tests the products during development process to be able to offer the matching product for each of your demands.

Surfaces with very good and excellent abrasion resistance have the abbreviation "AR" in the product name and scratch-resistant products can be recognized directly by the abbreviation "AR+".

- Scratch resistant (AR+)
- Excellent abrasion resistance (AR)
- Very good abrasion resistance (AR)
- Good abrasion resistance
- Normal abrasion resistance
- Low abrasion resistance
- Use only in the decoration area

ROLLED PACKABLE

Basically our design sheets are packed flat on pallets. However, in order to dispatch small consignments as favourably as possible, we have developed a packaging carton in which many of our design sheets can be packed rolled as well.

Number of panels and whether the decor side is rolled inside or outside can be found in the technical table of the respective product.

SMALLEST BENDING RADIUS

The given data refer to the smallest bending radius for concave or convex fixing. For all design sheets – with the exception of MultiStyle – all sheet edges must be fixed mechanically. For MultiStyle there is no need for mechanical fixing!

WEIGHT PER PANEL

The panel weight is given in kg and can be found in the technical table of the respective product.

TOLERANCES

Machine-related dimensional and angle tolerances:
+/- 2.0 mm in relation to 1,000 mm

Temperature-related dimensional deviations:
+/- 0.7 mm in relation to 1,000 mm at a temperature change of 10 °C

SURFACE PROTECTION

A protective film (Polyethylene/PE) protects our surfaces against damages. This protective film should be removed only after the application of our design sheets.

Design panels that are delivered without a protective film are listed in the technical table of the respective product.

PROCESSING

All mechanical processing must always be carried out from the decorative surface. Please consider the respective technical table of the selected product to ensure that the processing step is permissible for this product.

CUTTING

A majority of our decorative panels are easy to cut with a wallpaper knife. Simply scarve the surface (decor side) and break over the edge. For self-adhesive products (SA), the adhesive or foil must be cut through after breaking over the edge on the reverse side. Please always use good-cutting knives.

For machine cutting, we recommend to use paper or veneer cutting machines.

PUNCHING

Band steel cutting is recommended for design sheets in thickness from 1 up to 1.5 mm.

DRILLING

All SIBU DESIGN sheets can be drilled from the decor side.

All drillings must be carried out on a stable underlay (even MDF Board).

Drill recommendation: Wood drills, Forstner drills and hard metal drills – each with a center punch with two pre-cutters.

Core drills for wood can also be employed, but in this case it is essential that in the area next to the drilling the patterned sheet is attached firmly to a stable underlay.

SAWING

SIBU guideline values:

Material thicknesses of up to 1 mm:
HW 280x3.2 / 2.2x30 Z60 / 12.46-18.08 WZ

Thicker than 1 mm:
HW 250x3.2 / 2.2x30 Z40 / 19.63 WZ/FA
HW 250x3.2 / 2.2x30 Z40 / 19.63 FZ/TR
(speed 6000 rpm, progressive feed of up to 25 m/min).

For LEATHER-LINE and FABRIC-LINE:

HW 255x2.8 / 2.0x30 Z80 / 10.01 FZ WZ
(speed 6000 rpm, progressive feed of up to 10 m/min).

The best result is achieved with MDF underlay (4 mm) above and below, slow progressive feed and high speed.

*HW (hard metal material), WZ/FA (alternating teeth/bevelled edge), FZ (flat teeth), TR (trapezoidal teeth)

For SIBUGLAS:

Sheets can be cut with jig, hand-held circular, panel and circular table saws. During cutting on the reverse side, the underlay should also be sawn through. Then deburr all cut edges.

Select the speed and feed that are adapted to the saw blade. Use sharp cutting tools!

The generation of heat should be constantly avoided, as this can result in material tension.

Cutting to length using a hand-held or plunge cut circular saw
Cut from the reverse side and use a stable underlay.
Recommended saw blade: 160x2.2 hard metal blade with 48 alternating teeth.

Cutting to length using a jigsaw

Set the pendulum action to zero, or at a maximum to 1 and then saw from the reverse side. The patterned sheet must lie fully on the jigsaw cutting table in order to ensure that no vibrations are created. Recommended saw blade: employ saw blades with a tooth pitch of 1.2 to max. 2.5 mm. (coarse metal saw blade / fine wood saw blade / preferably PMMA saw blades).

MILLING

For material up to 2 mm thickness:

Cutter with 3 mm diameter, rotation speed from 12000 up to 24000 rpm, progressive feed up to 12 m/min.

Decor side on top:

milling cutter with a left-hand twist, cutting right.

Decor side below:

milling cutter with a right-hand twist, cutting right.

For material with a thickness of more than 2 mm, reduce the progressive feed and use a milling cutter with a larger diameter (6 mm).

LASER CUTTING

SIBU DESIGN sheets can be processed with standard lasers. The cutting speed depends on the wattage of the laser.

Note: Place the decorative panel on the laser machine so that its reverse side is on the machine's vacuuming side. As with all standard PMMA products, it is recommended to "temper" the material after laser cutting. The high temperature of the laser causes tension in the material, which could cause tension cracks. Tempering equalises these tensions.

HOT BENDING

Heat up the SIBU DESIGN sheets from the backside – for both, internal and exterior angles.

Approximate parameters for material in 1 mm thickness:

Wire temperature: approx. 200°C, heating time: approx. 6-20 seconds -depending on the surface material and bending tool

- hot bending is outwardly (decor outside = external angle) possible
- hot bending inwards (decor inside = interior angle) possible

Additional information

- LEATHER-LINE: wrinkles along the internal angle may appear when hot bending is done inwardly
- SG Hollywood: Only an inner corner on the visible side is possible. Guideline values: Duration approx. 110 seconds at approx. 200 °C degrees (depending on the bending tool)
- SL OCEAN: Only an outer corner is possible Approximate parameters for material in 2 mm thickness: Wire temperature: approx. 200°C, heating time: approx. 30-40 seconds

THERMOFORMING

With a variety of Deco-Line products light forming, by using flat and not sharp-edged tools, is possible (avoid sharp contours and use larger radii).

With every new moulding test are to be made, in order to obtain ideal results. The tool must be adapted to the material.

PVA-PRESSING

In order to obtain a compact design board with a decorative panel with material thicknesses of 1-4 mm, the design sheet can be pressed.

Due to the rigid adhesive connection between the decorative panel and the wooden beams, the finished board does not extend anymore and can therefore either be processed seamlessly on walls, or furniture fronts can be made. Detailed instructions for PVA-pressing can be found on page 120.

PRINTING

Owing to the many differing printing and colour systems, customers must carry out a printing test. The result will depend on the respective motif. We will be pleased to provide original samples for testing.

We classify with the statements "**yes**", "**no**" or "**on request**".

yes: Our print tests were positive, which means that not only the print looks good, but it also passes an abrasion and test test

no: Our print tests were negative, which means that either the print did not convince visually, or various tests were not passed.

on request: our print tests were positive with additional treatments, or not all tests were passed to full satisfaction. In this case, please contact us so that we can advise you.

The final adhesion performance will set in very slowly and can take up to one week on air-drying (20 °C.).

ACCESSORIES & SPECIAL EQUIPMENT

ADHESIVE RECOMMENDATION

Solvent-free assembly adhesive without plasticizers **Cartridge adhesive for strand bonding:**

K1-Hybrid adhesive: Bostik H551 Supergrip Multi, Ramsauer 640

Solvent-free assembly adhesive without plasticizers **Putty adhesive:**

Glutolin UK, Bostik Ardaflex® Multi (tooth spatula A2, B3)

Area of application: MS polymer hybrid adhesive is ideal for bonding the SIBU DESIGN product group SIBUGLAS on absorbent and non-absorbent substrates.

Detailed information on processing with Cartridge adhesive and putty adhesive on page 117.

Carry out adhesion tests and self-tests before bonding the panels!

PVA PRE-TREATMENT

In order to be suitable for PVA bonding, depending upon the material on the reverse side, SIBU DESIGN sheets either have to be pre-treated by means of an additional production process, or roughened by using a vibration sander (80-grain sandpaper).

Being able to carry out this pre-treatment for you in our factory, we absolutely need this information together with your order.

You can find detailed information on page 118.

SPECIAL FORMATS

In addition to the standard sizes given in the OVERVIEW we offer with pleasure individually adapted product dimensions.

FURTHER THICKNESSES

In addition to the standard formats specified in the OVERVIEW, we are happy to offer customized product sizes.

MAGNETIC

All SIBU DESIGN sheets are available with a magnetic back from 3 pieces onwards. Exception - all LL ROMBO and SIBUGLAS Hollywood.

SIBU magnetic foils are suitable on different metallic grounds and on magnetic colours. The exchange of design sheets thereby becomes a child's play! The application fields for the SIBU DESIGN magnetic program are nearly unlimited – for shop-window decoration, shop fitting and fair design or in the furniture area, decoration field and for all kinds of displays.

Self-adhesive SIBU metal film is employed when a suitable metallic ground is lacking. The metal film can be ordered as a sheet (2,600x1,000 mm) or roll (14 or 29 m)

CUTTINGS

You want to get customized sheets or cuttings? Please contact us that we can offer the best possible solution to you. With a cutting length up to 3.2 meter and a punching and sawing length up to 3 meter we are able to meet your requirements and needs promptly.

FIRE CLASSIFICATION

The products from the stock program are normally flammable and correspond to the fire safety regulations according to DIN 4102 B2 or UL Standard 94 measured value: 94 HB as well as EN 13501-1 classification (E).

Marked products **FR** are available in flame retardant version on request, on a different carrier material. Manufacturer's certificate of compliance of the following standards are available: EN 13501-1 and ASTM E 84. Info sheets on demand!

BASIC RULES OF PROCESSING

For worry-free processing and an optimal end result, you only have to take a few very important things into account! Below you will find the basic rules, as well as information on individual processing options and processing tips.

Please note that our product groups are sometimes structured differently and that some of them can also be processed differently. **Therefore, please always find out on the respective product page whether a specific processing is possible.**

The decorative panels are only suitable for indoor use.

Design panels that are delivered rolled should be laid flat for at least 24 hours. Additional weighting improves flatness.

Not recommended for use near an open fire or sources of intense heat.

Mechanical processing such as cutting, sawing, punching or drilling of the design panels is always carried out on the top side of the decor and not on the back.

It is imperative that sheet flapping be avoided totally during all working phases.

Always lay the sheets out flat and if necessary pin them down.

Ideal processing temperature +15°C to +30°C.

The decorative panels must be acclimatised, i.e. brought to room temperature before processing.

This serves to avoid the formation of condensate on the adhesive surface and to reduce the expansion of the panel due to reduced temperature differences.

The majority of our products are made of thermoplastics, which expand by around 0.7 mm – measured over a length of 1 m – when the temperature rises by 10 °C. For this reason, an expansion joint of approx. 2 – 3 mm must be allowed for at the board edges.

If the ambient temperature is high or the temperature fluctuates sharply, the expansion joint should be enlarged or the panel format selected smaller.

Tips for avoiding expansion joints: Either press the decorative panels or use the product group NATURE-LINE.

The substrate must be free of loose parts, dry, smooth, and free of dust, dirt, grease, wax and silicone. Depending on whether the substrate is absorbent or non-absorbent, various bonding options are used.

In the case of convex and concave substrates, mechanical fastening in the edge area is absolutely necessary.

The right processing depending on the substrate:

absorbent substrate:

- (e.g. raw MDF, plasterboard,...)
- Bonding with cartridge adhesive and putty adhesive see page 117
- Pressing decorative panels see page 118

non-absorbent substrate:

- (e.g. coated plate, glass, ect.)
- self-adhesive decorative panels see page 116

PROCESSING INFORMATION

SUBSTRATE PREPARATION FOR BONDING

The substrate must be free of loose parts, dry, smooth, and free of dust, dirt, grease, wax and silicone. Never mount SIBU design panels on uneven surfaces, as this results in a loss of visual quality.

In the case of convex and concave substrates, mechanical mounting in the edge area is absolutely necessary (except for MULTISTYLE)!

Detect underground:

Simply drop a waterdrop onto the surface - if it doesn't soak in and stays there, it's a non-absorbent surface.

Non-absorbent substrate:

To achieve maximum adhesion, always clean non-absorbent surfaces with alcohol (ethanol, isopropyl alcohol).

Self-adhesive panels (SA) are best suited for non-absorbent surfaces such as coated MDF/chipboard, glass, metal, plastic, etc.

Absorbent substrate:

For absorbent substrates such as raw chipboard, MDF, plasterboard or smoothed brickwork, a solvent-free adhesive must be used, which is suitable for both the substrate and the polystyrene material (carrier material). See adhesive recommendations on page 111.

BONDING OF SELF-ADHESIVE DESIGN PANELS (SA)

Our self-adhesive design panels, marked with the abbreviation „SA“, have a strong adhesive layer on the back of the decorative panel - made of high-quality acrylates or synthetic rubber - and can therefore be attached quickly and easily to non-absorbent surfaces.

The self-adhesive design panels are glued directly to the substrate, taking into account an expansion joint - without additional adhesive.

With self-adhesive products from the NATURE-LINE, the expansion joint can be omitted.

With self-adhesive design sheets (SA) - pull off the adhesive cover step by step, do not touch the adhesive surface and press as firmly as possible onto the subsurface. Absolutely avoid the formation of bubbles (air pockets).

For large areas, it is best to use a medium-hard rubber hand roller with a width of approx. 170 mm. The final adhesion is reached after 24 hours at room temperature.

Self-adhesive design panels (SA) are not suitable for ceiling applications. Alternative processing options are available upon request.

PROCESSING OF NON-ADHESIVE DESIGN PANELS (NA) WITH PUTTY ADHESIVE

The putty adhesive (solvent-free assembly adhesive without plasticizers) Glutolin UK and Bostik Ardaflex® Multi are perfect if you want to glue a non-adhesive design panel (NA) directly to an absorbent substrate. This is simply applied to the substrate with a spatula and the design panels are glued, taking into account an expansion joint.

Area of application: Putty adhesive Glutolin UK and Bostik Ardaflex® Multi (tooth spatula B3) are ideal for bonding SIBU DESIGN products to absorbent, even surfaces such as wood, MDF, plywood, chipboard, plasterboard or smoothed masonry.

The processing guidelines for the respective adhesive must be observed.

BONDING WITH CARTRIDGE ADHESIVE

Suitable for the product group SIBUGLAS

Strand bonding:

On the reverse side of the sheet: vertical positioning of a bead at a distance of 10 mm from the edge of the sheet or the profile leg, then position a mirrored adhesive tape at a distance of 10 mm.

It is recommended that the protective strip on the mirrored tape be removed prior to the further processing phases.

Apply vertical beads of adhesive to the reverse side of the sheet at intervals of approx. 10 mm to the mirrored adhesive tape. (Depending on the underlying surface, the beads should have a height of at least 4 mm.) Apply the other beads at a distance of 60 mm.

/// Adhesive bead ■ Mirror tape

The illustration does not show the entire length of the panel

Bring the sheet into position without any drying time and then press it down onto the prepared surface by means of vertical strokes with a soft wallpaper roller.

The gluing can also be done without mirror adhesive tape!

Advantage: The sheet can be positioned much easier.

Disadvantage: The sheet has to be temporarily attached until the adhesive beads have cured in order to prevent the plate from slipping unintentionally.

POINTING WITH SILICONE

Suitable for the product group SIBUGLAS

Once the adhesive has hardened, the joints can be sealed with silicone.

Immediately remove the protective film from the sheet and any possible adhesive residues.

PRESS DECORATIVE PANELS WITH WHITE GLUE (PVA GLUE)

DESCRIPTION – STRUCTURE

SIBUGLAS decorative sheet

PVA white glue

Wood based sheet

minimum thickness of 16 mm!

Use thicker wood based sheets for larger formats!

PVA white glue

Balancing sheet

Please refer to the technical spreadsheet of the product to see if pressing is possible.

PRE-TREATMENT OF THE NON-ADHESIVE DESIGN PLATE

If the design requires a pretreatment, please take a look at the technical spreadsheet of the product. However, the general rule is that products from the SIBUGLAS product group do not require any pretreatment.

Order pre-treatment from SIBU DESIGN

Since the production process is not done automatically, the PVA pretreatment must be advised with the order.

The pretreatment carried out by SIBU DESIGN is an industrial treatment with electrons to increase the surface tension.

Since the effect of the treatment decreases again over time, the design panel pretreated by SIBU must be pressed within 2 months after the delivery date.

Carry out pre-treatment yourself

The back of the decorative panel can be roughened using an orbital sander or random orbital sander. We recommend sandpaper with a 80 grains.

APPROPRIATE BALANCING SHEET

So that the finished pressed panel remains flat and distortion free, it is necessary to choose a suitable balancing sheet that matches the decorative panel according to its material characteristics and thickness.

On request, we can offer technically coordinated white grained balancing sheets.

The following items are suitable for the product groups listed:

25880 PMMA Balance Sheet White NA PVA

2800x1250x2

SIBUGLAS

25879 PMMA Balance Sheet White NA PVA

2600x1010x2

SIBUGLAS

25878 HIPS Balance Sheet White NA PVA

2800x1250x0,8

DECO-LINE, STRUCTURE-LINE, FABRIC-LINE, LEATHER-LINE

25877 HIPS Balance Sheet White NA PVA

2610x1010x0,8

DECO-LINE, STRUCTURE-LINE, FABRIC-LINE, LEATHER-LINE

If the Balance Sheet has not been pressed within 2 months, we recommend a check on the surface tension of the reverse side and if required, its subsequent surface treatment (sandpaper).

APPLY WHITE GLUE

- Lay the acclimatized SIBU decorative panel, balancing sheet and wooden based panel next to each other on a straight, clean and sufficiently large working table.
- The wooden based panel is cut approx. 10 mm bigger than the design sheet/balancing sheet.
- First of all put the PVA glue on the back of the design and balancing sheet using a glue roller – as evenly and over the entire surface as much as possible!
- Then both SIBU DESIGN sheets are put in the middle of the wooden support panel as soon as possible. No direct application of glue on the wooden carrier board – this can have a negative effect on the flatness.
- If the design sheet does not have a wrinkle-free protection foil due to transport or storage conditions, it must be removed before the pressing process.
- Afterwards the composite goes into the plate press.

SIBUGLAS with synthetic fibre backing: The consumption of PVA white glue is slightly higher due to the absorbent synthetic fibre backing. The glue consumption is approx. 200 – 300 g/m². The synthetic fibre should have a wet adhesive sheen shortly before gluing.

PRESSING IN THE PLATE PRESS

Do not press with too much pressure, use your own experience and know-how!

If the guidelines for the pressing time of the used white glue differ, the basic rule is: add 1 minute of pressing time per mm of material thickness or additional enclosure such as foam rubber.

STRUCTURE-LINE, FABRIC-LINE, LEATHER-LINE

Guideline: The press force should be around 2 kg/cm^2 (0.2 N/mm^2), the temperature around 45°C and the pressing time approx. 15 minutes.

During the pressing process a medium-hard foam rubber mat with a thickness of approx. 5 mm must be put between the pressing sheet and the decorative side of the sheet.

It achieves an even pressure distribution and at the same time it avoids unwanted pressure marks caused by dirt particles between the press plate and the design panel.

DECO-LINE

Guideline: The press force should be around 2 kg/cm^2 (0.2 N/mm^2), the temperature around 45°C and the pressing time approx. 15 minutes.

Flat design panels are better being pressed without a foam rubber. The foam rubber could make the surface seem too uneven. In order to easier get a smooth surface, ask us for decorative sheets in 2mm thickness.

ATTENTION: When pressing mirror or high-gloss products, an absolutely undamaged, clean pressing plate is required.

SIBUGLAS

Guideline: The press force should be around 2 kg/cm^2 (0.2 N/mm^2), the temperature around 30°C and the pressing time approx. 30 minutes.

- As soon as the sheets are removed from the press, they must be stored flat in stack pressure.
- A really even base is important for the flatness of the bonded panel!
- Cover the stack with 19 mm chipboard so that the top board can also be laid out flat.
- Let the panels cool down in the stack after the pressing process – preferably overnight (for at least 12 hours).

A second option for small quantities is to press the panels in the machine overnight at around 20°C . This type of processing does not require stack pressure afterwards.

PROCESSING OF THE PRESSED DESIGN PANEL

Glued and pressed panels can be processed simply with most of the standard woodworking machines and woodworking tools.

During the process, the PE protective film must remain on the surface. The use of suitable and well-cutting tools prevents damage. Ideal machine parameters, tool design and cutting speeds have to be observed individually with a sample production before the manufacture.

The finished pressed design panels can be easily cut to size with a saw and then be provided with commercial edges made of plastic, aluminium or wood.

SELF-ADHESIVE DESIGN PANELS BONDED ONTO COATED WOOD BASED SHEETS

including edges and milling

Suitable for the product group SIBUGLAS

MATERIAL REQUIREMENTS

SIBU decorative sheet:

SA dimension: 2600 x 1000 mm, self-adhesive

Wood based sheet:

Wood based sheet coated on both sides, dimensions:
2600 x 1000 mm

Counter-pressure:

Not required

Edge material:

All standard furniture edging

PROCESSING STEPS

1. Clean the coated wood sheet.
2. Remove the protective film on the adhesive side of the design sheet.
3. Bond the design sheet onto the wood based sheet using a rubber roller.
4. Immediately cut the bonded sheets into the desired final dimensions (saw).
5. Place the edgings on the edge gluing machine.
6. **Using an electrical manual router, cut a rounded or chamfered edge exactly up to the point of transition from the transparent PMMA layer/PS layer to the structured layer. Please see sketch!** In combination, the edge material and the transparent PMMA layer/PS layer give the resultant radius or chamfer. The thicker the edge material, the wider the facet.

"FACET MILLING IS THE PREREQUISITE FOR AN EDGED END PRODUCT!"

PROCESSING NATURE-LINE

Underground:

Bonding of the self-adhesive NATURE-LINE product panels without expansion gaps on all substrates.

The substrate must be dry, smooth, free of loose parts, dust, dirt, grease, wax and silicone.

Mechanical processing:

must always be done from the decor surface. The products can be easily cut with a wallpaper knife on site.

Bonding:

- Remove the adhesive cover step by step, avoiding contact with the adhesive surface and press as firmly as possible onto the subsurface. (Absolutely avoid the formation of bubbles / air pockets)
- For large areas, it is best to use a medium-hard rubber hand roller with a width of approx. 170 mm.
- The final adhesion is reached after 24 hours at room temperature.

Easy format customization

Processing without expansion gaps

Thin and dimensionally stable

STORAGE

SIBU DESIGN sheets must always be kept in indoor stock, no storage outside!

The following must be taken into account:

- Design sheets to be stored flat, rolled packed design sheets should be unpacked and laid out flat and - if necessary - subjected to additional weight to improve flatness (Use carton underlay and weigh down the entire sheet in order to prevent damage.)
- Store the uppermost plate in the pile with decor side down.
- Protect SIBU products from UV rays.
- Do not expose SIBU products to moisture or humidity.

- Protect material from dirt, dust and mechanical damages.
- A permanent storage of more than 3 months at a temperature less than 0 °C or more than +30 °C may impact the quality of our design sheets and should be avoided.

SIBUGLAS:

Wrap the sheets in foil, enclose and seal the silicate bag. This prevents possible rippling in the edge area of the panels due to the effects of air humidity.

TRANSPORT

In general, for the transport of SIBU products pay attention to protect them from dirt, UV radiation, moisture and mechanical damages.

- Use stable, flat pallets with carton bedding, the pallet should be longer than the design sheets.
- Place the uppermost design sheet on the pallet with the decor side face down. This uppermost design sheet should be protected in addition by a carton and a board (e.g., chipboard, HDF...).
- The design sheets should be protected from shifting.
- The edges and sides must be also protected (edge protection, PE foil ...)

- Avoid temperatures below – 35 °C or more than + 50 °C.
- Structured sheets to be transported on pallets with the patterns running in same direction.
- SIBU products must be acclimatized prior to processing; ideal processing temperature is approx. + 10 °C to + 30 °C.
- Before any processing of the design sheets read the attached processing instructions which you can also find on the SIBU website!
- Rolled packable - Information in the technical Table for the respective product

CLEANING

Do not use abrasive cleaners, solvent cleaners or pure alcohol!

DECO-LINE, STRUCTURE-LINE, NATURE-LINE, MULTISTYLE, SIBUGLAS: in case of light dirt by means of soft cleaning cloth (it should be free of dust and free of dirt). In case of heavy dirt by means of standard plastic or window cleaner (spray cleaners not onto the material surface, but sparingly onto the cleaning cloth).

LEATHER-LINE: Clean leather surfaces by means of standard liquid soap and then remove the soap with a humid cloth.

FABRIC-LINE: Stains caused by oil, greases and ink must be removed immediately. Vacuum the surface in case of low pollution; in case of heavy pollution, dab the stain with an absorbent cloth, then wipe it off with mild soapy water.

DISPOSAL

The keeping of healthy environment has high priority for us! We check all raw materials used for their environmental compatibility. Because not everyone has its own plastic disposal container, we pay special attention in development of new products to use only high-quality materials: materials, which may be disposed safely with the domestic waste. On

demand we are pleased to provide LGA certificates for all SIBU DESIGN sheets.

NATURE-LINE: The design panels can be disposed and recycled via waste paper and therefore environmentally friendly beyond their life cycle.

This information tool was provided according to the best knowledge and with special care. The information is based on practical experiences, test results as well as on in-house testing and corresponds to our today's state of knowledge. Detailed info sheets are available on request. No liability is accepted for misprints, norm errors and mistakes!
